Key Insights

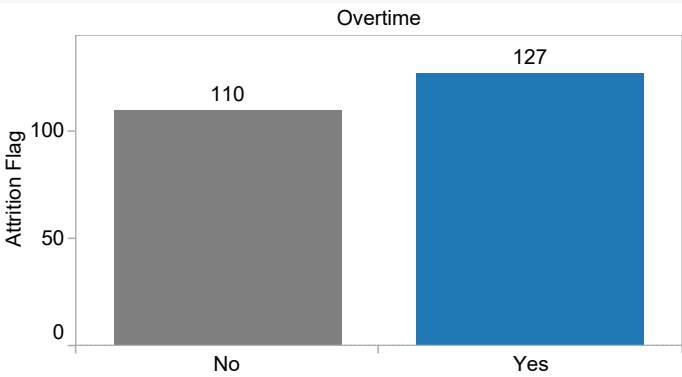

- Overall attrition rate is 16.12%, meaning approximately one in six employees leaving the organization.
- Turnover is concentrated within specific departments and job roles, indicating that retention issues are not organization-wide.
- High employee turnover in key operational roles may increase recruitment costs, training expenses, and productivity loss.
- Targeted retention initiatives are likely to deliver greater impact than broad workforce-wide programs.

Recommendations

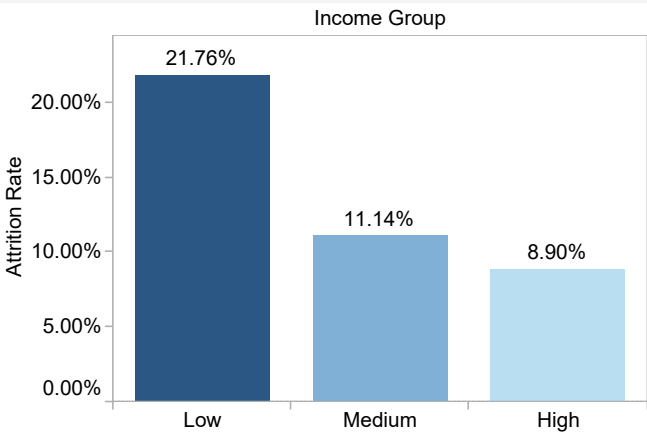

- Prioritize retention efforts in high-attrition departments and roles.
- Review workload and career progression opportunities in high-turnover departments.
- Establish regular monitoring of attrition KPIs to proactively identify workforce risks.

Attrition by Tenure Group

Attrition by Job Satisfaction

Key Insights

- Employees working overtime demonstrate substantially higher attrition rates than those with standard work schedules.
- Lower-income employee groups experience higher turnover rates, indicating compensation may influence employee retention.
- Attrition is highest among employees in their early years (0-2 years) with the organization, highlighting onboarding and early-tenure retention challenges.
- Lower job satisfaction levels are strongly associated with increased employee turnover risk.

Recommendation

- Evaluate overtime practices and workload allocation within high-risk teams.
- Review compensation competitiveness for lower-income employee segments.
- Enhance onboarding, mentoring, and employee engagement initiatives during the first few years of employment.
- Proactively track employee satisfaction metrics to identify retention risks before turnover occurs.
